## SESSION 163

# Case Discussions in Management of Opioid Use Disorder

This workshop will allow the participant to discuss management of various issues that commonly occur in the treatment of opioid use disorder. Common case scenarios will be reviewed, but participants are also welcome to bring their own clinical cases for discussion

1. Describe a therapeutic approach to the patient with persistent positive urine drug screens.
2. Discuss diversion behaviour with a patient.
3. Outline key considerations for management of opioid use disorder in pregnancy.
4. List some options for managing acute pain in patients who are taking buprenorphine/naloxone.
