SESSION 270

Vaginal Delivery and Neonatal Skills Stations

Presented by members of the SRPC maternity and newborn care committee, this session will offer participants hands-on opportunities to practice several skills related to vaginal delivery and neonatal resuscitation. Moving through stations at their own pace, stations will be facilitated by faculty who will provide feedback and share updates in best practices for approaches to several skills and scenarios. This session will cover:

1. Normal delivery and the somersault maneuver for nuchal cord.
2. Umbilical vein catheterization.
3. Newborn airway management.
4. Neonatal resuscitation

At the end of the session participants will have an increased comfort and familiarity with these situations and techniques.
